, Ltd was set up in 1998 and located in Hongye Industrial Park, XiXiang, BaoAn District of Shenzhen, China, it is a professional and creative hightech manufacturer of switching mode power supplies and chargers. You can receive it within 35 days or 57 days after we deliver the goods, different country the transport time is different. 2. Shipping by Air or by Sea also is acceptable for us. 3. It is available to deliver the goods to your forwarder warehouse in China FAQ 1. Are you a trade company or a manufacturer. We are an ISO, SGS, INTERTEK, UL, CE, FCC, PSE, KC approved manufacturer

specialized in LEVEL VI power adapters, wall chargers Products. A The delivery date is about 2530 days after receipt of payment. 4. What is your payment terms A 30% deposit in advance and 70% balance before shipment. 5. Can you send free samples. A Yes, free samples are available; you just need to pay the express fee. Emerging growth A more thorough discussion of certain risks, uncertainties and other Actual future financial and operating results, including demand growth and energy source mix; production growth and mix; project plans, dates, costs and capacities; Forward looking statements are not guarantees of future performance and involve a number of risks and uncertainties, some that are similar to other oil and gas companies and some that are unique to Imperial Oil Limited. Imperial Oil Limited undertakes no obligation to update any forward looking All financial information is presented in Canadian dollars, unless otherwise indicated. In these materials, certain natural gas volumes have been converted to barrels of oil BOE may be misleading, particularly if used in isolation. A BOE conversion ratio of 6 Mcf to one bbl is based on an energy equivalency conversion method primarily Given that the value ratio based on the current price of crude oil as compared to natural gas is significantly different than the energy equivalency ratio of 6.

<http://www.eleco99.com/images/brother-xl-2630-sewing-machine-manual.pdf>

Mcf to 1 bbl, using a 61 conversion ratio may be misleading as an indication of value. All reserves and contingent resources estimates provided in these materials are effective as of December 31, 2016, and based on definitions contained in the. Except as otherwise disclosed herein. Reserves are the estimated remaining Proved reserves are those reserves which can be estimated with a high degree of certainty to be recoverable. Probable reserves are those additional Contingent resources do not constitute, and should not be confused with, reserves. Contingent resources are those quantities of petroleum considered to be potentially recoverable Contingencies that preclude the classification of Contingent resource volumes represented in these materials are technical best estimate volumes, considered to be a realistic Estimates of contingent resources have not been adjusted for risk based on There is uncertainty that it will be commercially viable to produce any portion of the resource, nor is there certainty as to the timing of any such development. Significant positive and negative factors relevant to the The estimates of various classes of reserves proved and probable and of contingent resources in these materials represent arithmetic sums Readers should give attention to the estimates of individual classes of reserves Production, kbd 1 0 40 80 120 160 200 2014 2015 2016 YTD 17 Base production Growth History of strong performance Recent growth with Nabiyestartup 160 kbd near term average Presented in accordance with National instrument 51101 2 Proved reserve life based on 2016 production rates Upstream resources Large, high quality resource base offers significant potential In situ SASAGD, CSP, other technologies Unconventional Competitive ranking Leading refining performance in North America, toptier in Canada Imperial refineries Canadian industry ex.

Imperial 1st 2nd 3rd 4th Energy efficiency Nonenergy cash opex Total cost Net cash margin Performance quartiles Production of power and steam, at the same time from the same fuel, for use in operations. 1. Natural gas fueled generator produces electricity 2. Generator exhaust used to produce steam. Cogeneration facility Unparalleled history of creating value management that enhances value through research and innovation Value chain integration Shareholder value Synergies across the full value chain Demonstrated commitment to delivering including ExxonMobil relationship value in all business environments Imperial 2017 31. See ioPower. Works with low bandwidth connections Ultrasecurity using full 1024bit PKI authentication and 256bit SSL encryption High user management. PRIMA IP8 and PRIMA IP16 are two IP KVM switches. However due to the integration, the functions provided by PRIMA IP outperform the coupling of PROKLE with any other conventional KVM. PRIMA IP allows you to access your servers with total security and

convenience. You can work or carry out maintenance operations from any location in the world over the Internet, or from any office of your company over your LAN. PRIMA IP does not need any specific cabling; it uses the existing network infrastructure. PRIMA Center All PRIMA IP KVM switches can be managed by PRIMA Center. All you need is to login the PRIMA IP and download the viewer program. You can also access your computer with a tablet or smartphone using the Android viewer PrimaView provided your KVM switch is running a recent firmware december 2013 or later. Contact us if you are not sure. Network Connections Normally, PRIMA IP is connected to an Ethernet LAN accessing the Internet via a router. However, PRIMA IP provides a PPP server or client connection through its highspeed RS232 port. When set up as server, it can accept direct connections over a simple dialin modem phone line, providing a backup system to access your servers while your network is down.

When set up as client, it permits a redundant connection to the Internet via a modem. Local Console You can connect a local PS2 keyboard, mouse, and monitor to PRIMA IP. The local user sees the same screen as remote users, but the mouse is faster because there is no transmission delay. The local user can select the computer and can do a restricted set of configurations by using the local OSD function. OSD At the local console, in addition to keyboard hotkeys and frontpanel buttons, Prima IP also provides OSD menus for intuitive KVM switching operations and for some basic settings such as IP address. The OSD menus displays the computer names that have been setup by using the web management interface. Power Control PRIMA IP can drive most of power supply units that are controlled through a local RS232 connection. The powersupplyunit login and control messages are totally configurable. Using a power supply unit makes it possible to remotely power off and power on the servers individually. See ioPower. Monitoring and alarms PRIMA IP can survey the servers automatically and detect several symptoms revealing a mal functioning machine. When a faulty server has been identified, and depending on the detected default, PROKLE can generate an alarm email describing the problem to several destinations. It can also send an SNMP trap to an SNMP manager. Security PRIMA IP distinguishes itself among its peer products not only in its stability in durable performance, but also in its industrystandard security features such as full 1024bit PKI Authentication and 256bit SSL data encryption. You can choose from among three security levels in combination with three types of password policies and three categories of user privileges. When the full PKI is in service, you must provide a set of certificates permitting a bidirectional authentication of the remote user by PRIMA IP and PRIMA IP by the remote user.

These certificates can be managed internally in your company or bought from an official CA such as Verisign for example. The Prosum technical support can help you to manage and generate your certificates. User Groups PRIMA IP permits to create user groups, each of which being a subset of computers. Each user is attached to a specific user group and can access only those computers that are within that group. User groups can be managed locally or can be provided by remote radius or LDAP servers. Daisy Chain PRIMA IP can be the master of a daisy chain of up to eight PRIMA KVMs, increasing the possible number of computers under local and remote control to 128. Remotely, any server in the daisy chain can be selected by a simple mouse click. PRIMA IP manages automatically the firmware of all PRIMA KVMs in the daisy chain, upgrading them to the last version when needed. It collects also all log messages that can be consulted remotely. The daisychain system, which is much better than the simple port cascade that most of competitor provide, permits to maintain exactly the same high video quality whatever how many devices are interconnected. Metal Enclosure The PRIMA IP KVM switches are robust and durable. Their metal enclosure provides better shielding against electromagnetic interferences commonly seen in lab or factory environments. Software Upgrade The PRIMA IP software is stored in Flash memory and can be upgraded remotely via the web management interface. They are available in 1.2m, 3m, and 5m lengths. Delivery PRIMA IP KVM switches are delivered with all their accessories power adapter, daisychain cable and rack mount kit. Warranty and Technical Support Prosum provides one year warranty and free technical

support. To connect a computer using the USB interface, plug only the USB connector. The mouse and keyboard are combined by the KVM into a single composite device that needs only one USB interface. These cables are available in 1.8m, 3m, and 5m lengths.

CAB20675M, CAB20671.8M, CAB20673M User Manual Data Sheet Get the Last Software Version Software tool for finding and changing the IP address Getipdev. Please upgrade your browser or activate Google Chrome Frame to improve your experience. No need to switch on, the cup or mobile phone can be charged or heated immediately, very convenient. The cup can heat tea, milk, coffee, etc. Note Case charging cable and Apple Watch charger cable not included. The perfect gift for family and friends. Qi certification, safe and reliable The charging station uses Qi wireless technology, built-in wireless charging receiving module and heating plate, intelligent temperature control sensor and temperature control chip can provide temperature control, short circuit protection, power protection and foreign body detection. When the cup leaves the base, The power will turn off automatically to protect your device from damage caused by overcharging, so you and your device are safe. No need to switch on, the cup or mobile phone can be charged or heated immediately, very convenient. Note AirPods case charging cable and Apple Watch charger cable not included. The perfect gift for family and friends on Christmas or birthday. When the cup leaves the base, The power will turn off automatically to protect your device from damage caused by overcharging, so you and your device are safe. Do not disassemble or maintain without the help of professional. Meanwhile, this terminal has a 320X240 TFT LCD screen, show all the operation information and status. Fit for restaurant. The normal operating distance is within 3cm. The width of thermal printing paper is 58mm. It ISO7811 standard. Serial interface 1 RS232, Baud rate is highest for 115200bps, communication can be programmed. Pay attention to magnetic cards should be kept horizontal. Installation of Operation is subject to the following two conditions 1 This device may not cause harmful interference.

2 This device must accept any interference received, including interference that may cause undesired operation. 2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. NOTE This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. The limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures Reorient or relocate the receiving antenna. Increase the separation between the equipment and receiver. Connect the equipment into an outlet on a circuit different from that to which the receiver is connected. RF warning statement The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction. Bodyworn Operation This device was tested for typical bodyworn operations. To comply with RF exposure requirements, a minimum separation distance of 1.5 cm must be maintained between the user's body and the handset, including the antenna. Third party beltclips, holsters, and similar accessories used by this device should not contain any metallic components. Bodyworn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided.

Use only the supplied or an approved antenna. SHS800 Series I 3 Safety Information Carefully read the following safety information before using the SHS800. Specific warning and caution statements, where they apply, appear throughout the manual. A Warning identifies conditions and actions that pose hazards to the user. A Caution identifies conditions and actions that the user should notice. The

following international symbols are used on the SHS800 and in this manual Hazardous Protective Warning Earth Ground Power Voltage Earth Ground Switch Use only insulated voltage probes, test leads and adapters supplied with the SHS800, or accessories appointed by the company. Before use inspect voltage probes, test leads and accessories for mechanical damage and replace when damaged. Always connect the battery charge first to the AC outlet before connecting it to the SHS800. Do not apply voltages that higher than 600 V from earth ground to any input when using scope ports in a CAT environment. Do not apply voltages that higher than 1000 V from earth ground to any input when using scope ports in a CAT environment. Do not apply input voltages above the rating of the instrument. Use caution when using 11 test leads because the probe tip voltage will be directly transmitted to the SHS800. Do not apply voltages that higher than 300 V from earth ground to any input when using multimeter ports in a CAT environment. Do not apply voltages that higher than 600 V from earth ground to any input when using multimeter ports in a CAT environment. Do not apply voltages that higher than 300 V from earth ground to the isolated inputs when using multimeter ports in a CAT environment. Do not apply voltages that higher than 600 V from earth ground to the isolated inputs when using multimeter ports in a CAT environment. II SHS800 Series 4 Do not insert metal objects into connectors. Use of the SHS800 in a manner not specified may impair the protection provided by the equipment.

Before use, inspect the test leads for mechanical damage and replace damaged test leads. Whenever it is likely that the safety has been impaired, the SHS800 must be turned off and disconnected from the line power. The matter should then be referred to qualified personnel. Warning Standard probe 101 supports CAT 400V. Optional probe supports CAT 1000V and CAT 600V SHS800 Series III 5 Safety Operation of Battery SHS800 series handheld digital oscilloscope can be used to test float signal when power supplied by battery. When using the double channels to test float signal, the two channels should be connected to the same earth ground, because the earth ground of the two channels is connected Warning Do not connect the ground spring to voltages higher than 42 V peak or 30Vrms from earth ground. Warning Do not use USB line to connect SHS800 to any instruments such as computer, printer and so on which connected to the earth ground, or the SHS800 and the instruments connected with will be burned. IV SHS800 Series 6 Introduction of SHS800 Series This manual mainly introduces SHS800 series Handheld Digital Oscilloscope. The SHS800 series is a high performance handheld oscilloscope with great range of dynamic input scope. It has small volume which convenient to carry, compact interface and etc. It satisfies the most needs of outside measurement and improves working efficiency greatly. Function Characteristics The SHS800 combines the functions of oscilloscope, multimeter and recorder including trend plot and waveform recorder along with double channels. Oscilloscope channels input voltage grade voltage inputs directly through a BNC probe is as high as CAT 300V and CAT 150v. Standard probe 10X CAT 400 Optional probe 10X CAT 1000V and 10X CAT 600V Oscilloscope and multimeter safety grade is CAT 600V and CAT 300V 5.7 inches color TFT LCD. The multimeter display resolution is 6000 points and can measure voltage, current, resistance, capacitance, diode, continuity.

Standard configuration interface USB Device, USB Host. Support software update with USB flash driver, PC remote control and PicBridge print. For its buildin Li battery and small volume, it s convenient to carry and work outside. V Function Characteristics. The following contents introduce the function of the front panel. CH2 vertical range and position keys 16. Ready The scope has sampled all pretriggers data and is ready to accept trigger. Trig d The scope has found a trigger and is sampling data after trigger. Stop The scope stops sampling data. Auto The scope is sampling waveform without trigger under automatic mode. Scan The scope samples and displays waveform under scan mode. 2. Shows location of current waveform in the memory 3. Shows the trigger position in the memory 4. Print Key option chooses to print figure Print Key option chooses to save figure 5. USB Device option chooses to connect computer USB Device option chooses to connect printer 6. Shows power state 12. B shows the BW limited is on 7. Shows current time 13. Channel s

vertical range 8. Horizontal position 14. Channel s coupling states 9. Frequency Counter is a symbol of channel Shows the trigger level is a symbol of channel Shows the time base 17. T shows the trigger level SHS800 Series 3 13 Function Check and Probe Compensation Function Check Let s make a quick function check to make sure whether the SHS800 works normally. Please do the following steps 1. Power the SHS800. The SHS800 performs all the self check items and makes sure that it passes the self check. 2. Connect the probe to the CH1 of the SHS800. Align the slot of the probe connector with the salient on the CH1 BNC, push down and twist right to lock the probe. Connect the probe tip and reference lead to the Probe Comp connectors. 3. Press Auto, you will see a square wave with 1 KHz frequency and about 3V peakpeak in a few seconds. 4. Press CH1 twice to cancel channel 1, then press CH2 to display channel 2 and repeat step 2 and 3.

Probe Compensation When you connect the probe to an arbitrary channel for the first time, please make the following adjustment to make the probe match with the channels. Probe without compensation or compensation warp may lead to imprecise or false measurements. You can perform the adjustments manually to match your probe with the input channels. 1. Set the probe option attenuation in the channel menu to 10X and connect the probe to channel 1 on the scope. If you use the probe hooktip, make sure that the hooktip is fixed on the probe firmly. 2. Attach the probe tip to the Probe Comp 3V connector and the reference lead to the Probe Comp Ground connector. Display the channel and then push button Auto. 3. Check the shape of the waveform displaying on the screen. Under Compensated Correctly Compensated Over Compensated 4. Please adjust your probe or repeat all the operations above if necessary. Multimeter meter pen To avoid obtaining no measurements or unnecessary damage to the SHS800, you should use the right jack when measuring current, voltage and other measure. 4 SHS800 Series 14 Chapter 2 Using the Scope About this Chapter This chapter provides a stepbystep introduction to the scope functions of SHS800 series. The introduction gives basic examples to show how to use the menus and perform basic operations without d covering all of the capabilities of the scope functions In order to use the SHS800 effectively, we need to know the functions of the SHS800 below. Menu and control buttons, connector and control, autoseettings, Scope, measurement system, trigger system, storage system and utility system. Automatic Setting Application Example Operating steps 1. Input a signal to CH1 or CH2 and then press Auto. 2. The SHS800 adjusts its settings automatically to display the best peakpeak, average, period, frequency and other information according to the characteristics of the signals. 3. Adjust time base and voltage range manually to obtain waveforms needed if necessary.

<http://gbb.global/blog/bosch-hbl8650uc-manual>
