Owner's manuals provide drivers with lots of basic knowledge and safety information that can give you peace of mind when operating your vehicle, and critical help if you find your car broken down on the side of the road. If the previous owner lost the manual, then you'll be stuck without one. Thankfully, there's no reason to worry. There are many different ways to find a manual for your used car, so that you never have to be without the knowledge and security that a manual affords you. Virtually every car manual can be found online. There are many websites, such as Vehicle History and Owner's Manuals for Cars that offer free PDF versions of owner's manuals. Between these two sites and Google, you should be able to find an online version of the manual you're looking for. Many manufacturer websites also offer free online owner's manuals, though you may have to log in or enter your car's vehicle identification number VIN in order to access the manuals. Unlike a traditional owner's manual, you can't put an online manual in your glove compartment, so it's less helpful when you find yourself having an urgent vehicle question while you're on the road. If you want a physical copy of the owner's manual for your used car, the best thing to do is contact the manufacturer and request one. Most automakers are more than happy to provide you with an owner's manual, though you may have to pay a small amount to get one. If your used car is still fairly new, then the dealership may have some manuals in stock. If the vehicle is a little older, the dealership will likely have to order a manual.

If you don't have any luck calling the dealership, then try contacting a customer service representative for the manufacturer, and ask them if they can send you a copy of the owner's manual. If your local dealership is unable to provide you with a copy of the owner's manual, then chances are you have a rare or older vehicle. That makes it harder to find an owner's manual, but

it's not impossible. Some websites, such as Books 4 Cars, have a large inventory of owner's manuals for sale at fair prices. If you're unable to find the owner's manual for your vehicle online, keep checking periodically, as one may appear for sale in the future. Even though owner's manuals can help you diagnose problems with your car, it's always a good idea to have professionals handle vehicle inspections. If you ever don't feel comfortable working on your car, put down the manual and give a reputable technician, such as the ones at YourMechanic, a call. A quick read of the owner's manual might have helped some drivers avoid thinking the car was safely in parking gear when it was not. But whatever one's opinion is of a car gear shifter that requires special instructions to operate, an anomaly of the Fiat Chrysler fiasco is this The company is actually an industry leader when it comes to providing state-of-the-art user guides for its increasingly complex vehicles. The automaker offers an array of smartphone apps, web videos and other digital means for letting owners know how to drive their cars. The app's instructions for the 2015 Grand Cherokee gearshift, accompanied by a photo illustration, flag an important point that perhaps too many people have missed, "The electronic shift lever in this vehicle does not slide like a conventional shifter." Along with other carmakers, Fiat Chrysler has come to realize that consumers these days are as unlikely to read the voluminous owner's manual traditionally stuffed in the glove box as they are to read a printed telephone book. In some ways Fiat Chrysler, Toyota and other digital adopters are simply trying to catch up to their user communities. But they are also adopting digital instructions because cars have become so complex and feature-laden that printed manuals, with their step-by-step instructions and myriad legal warnings, are becoming unwieldy.

If Fiat Chrysler still printed its manual, it would be 700 pages long and contain 240,000 words, said Tricia Hecker, head of the company's connected vehicle group. Longer, for comparison's sake, than Dostoyevsky's "Crime and Punishment." Fiat Chrysler first went to a digital user's guide in 2009, mainly as a money-saving step when the company was in dire financial straits. But the initial effort was blandly utilitarian. "It was just a regurgitation of the printed manual," Ms. Hecker said. Image An app version of the 2015 Jeep Grand Cherokee owner's manual. Credit. Chrysler Today, though, the company offers smartphone app versions of all its vehicle manuals. Users can search for instructions by topic, concept or alphabetically. Videos are often embedded in the instructions. The Fiat Chrysler app also gives users a place to write and email pertinent information after an accident, as well as a listing of maintenance schedules, active recalls and an accessory shop. Toyota's owner's manuals are available as smartphone apps and on the website. But rather than being reimagined for the screen, Toyota's digital manuals are simply shrunk pages of the paper ones. The company also

continues to offer paper manuals in all its vehicles, to accommodate older buyers. "We're sticking with paper; some generations love the paper version," said Brian Williams, head of the company's marketing and product education division. "Sometimes you may not have your phone or be near a website, and it's also a lot quicker to flip through the paper index." For those willing to click beyond the minimanual pages, Toyota offers howto videos. The app also displays explanations of dashboard warnings and can be used to schedule service, view the vehicle's service history or request roadside assistance. "People don't see manuals as something you can learn from," said Manish Mehrotra, senior group manager for digital business and connected operations at Hyundai.

Although Hyundai still provides paper manuals and webbased PDF versions, the company has also introduced an augmentedreality feature to its app. Point the smartphone at the engine, exterior, or interior of one of its vehicles, and an exploded threedimensional view of various parts appear on the screen, with explanatory videos and operating instructions. Limited augmented reality is also available with Fiat Chrysler's owners' app. By hovering a smartphone over the vehicle instrument cluster, users can read textbased explanations of each warning light's function. An owner's app for BMWs performs a similar function to help users solve the riddles of the various buttons in the car. Manufacturers are also beginning to make some of the information on the smartphone apps available through the vehicle's dashboard digital display. Fiat Chrysler has done so for its Chrysler 300 and Pacifica models, as well as the Dodge Charger and Dodge Challenger, showing users how to connect a garage door opener to the vehicle's controls. Since this migration, use of the app's help feature has risen to 16 percent of owners, from only 5 percent before, Ms. Hecker said. Tesla, the maker of expensive allelectric cars, has always offered its owner's guide through its vehicles' giant 17inch touch screens. And just as a Tesla car regularly receives software updates from the cloud to alter the vehicle's functionality, so too is the instruction manual always kept uptodate via software downloads. Future systems will not always wait for a driver to ask how to do something. Instead, they might sense what the driver needs and proactively offer to help. Chrysler, for example, is at work on an app that would not merely offer an explanation of how to connect a garage door to the vehicle's HomeLink system but also notice when the driver has not done it and ask if he or she would like to know how.
