We hate spam more than you do No selling of your info or spamming you, ever. This notice can be dismissed by clicking the close icon at the top right of the message. Welcome! It has a gear box with forward and reverse. Key ignition, stator, full suspension, coil over shocks, live axle, rack and pinion steering. I just replaced the rings and piston on the engine when I bought it just because it was cheap to do it. Comes with a whole ton of bolt on performance parts. Here is a short list. there is much more than this but I dont feel like listing it all Prodigy race clutch, bellhouse, and kevlar belt race exhaust 30mm pumper carb aluminum intake elbow performance cdi uni filter etc etc etc I have a bunch of stock parts for it as well. All the parts that come with it are in like new condition. I also have spares for the clutch stuff like different rpm springs, main springs, rollers etc etc etc Nice kart. Its a real smooth ride. THE BAD Right after getting the engine right it broke three teeth off of the driven gear causing it to bind and split the transmission cover. The cover costs 20 new online, the gear is 20 new online and the gasket for the cover is 5 bucks. You can find the whole cover with the gears inside of the cover on EBAY for like 10 bucks plus shipping but they are used. Either way its a cheap and easy fix. These cost around 2k new and it has at least 1k in performance parts. Im not trying to make any money off of this, In fact Im counting on loosing money. I paid 1k for it and then put the new rings and piston in it. I would consider an offer of 800 just because its gonna take money to get it going. It cranks right up and runs fine. You can even move it back and forth a little.

Everything works perfect except for the parts stated. Something went wrong. Learn more opens in a new window or tab This amount is subject to change until you make payment. All Rights Reserved. User Agreement, Privacy, Cookies and AdChoice Norton Secured powered by Verisign. This software is generally referred to as the Machine Control Software. The name of the machine control software from Carbide 3D is Carbide Motion. This software allows you to jog your machine, home your machine, load GCode, create offsets, and allows some manual control of the machine via the MDI. Select the default settings and click next and continue until the program is installed. To install Carbide Motion, simply drag the Carbide Motion icon onto the Applications folder.

Carbide Motion will be your main point of entry when using your Nomad or Shapeoko 3. Continue through the driver installation until complete. Also, after you load a project, you'll be shown this screen again. From this screen you can verify that the extents maximum travel of your project match what you are expecting and you have selected to correct file. From there, you can paste the plain text version into your favorite text editor. Get familiar with the jog features and sub features because you'll need to use a combination of them before running any job. Be careful using this feature as your machine will move a few steps beyond letting go of the button. Use the when you're finding an edge or touching off your zero point. Selecting each size, and clicking a direction button will result in that axis moving at the specified increment. The window will expand to fill the screen, and everything will enlarge to make touch access much easier. It is possible to change configuration settings and adjust defaults through the MDI, but none of this should be done unless you know what you're doing, or you've been given instructions from Carbide 3D support to adjust these settings. Again, this isn't required, but for experienced CNC users, you may find this option useful.
